DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-2, 11-12, 6-9 and 16-19, drawn to supplying power to a powered device which is adapted to receive power selectably from a battery, said method comprising acquiring information about power requirements of said power device, classified in class 700, subclass 295.
 - II. Claims 3-5 and 13-15, drawn to determining the type of a powered device, classified in class 700, subclass 286.
 - III. Claims 10 and ~~20~~, drawn to determining the power requirements of a powered device adapted to receive power selectably from a battery and a configurable power supply, comprising preloding said battery with a resistive load, classified in class 700, subclass 297.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because identifying the type of the powered device by comparing the analyzed dynamic load characteristics with templates

Art Unit: 2125

is not required for Group I. The subcombination has separate utility such as determining the type of a device.

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because preloading said battery with a resistive load and detecting the extent of voltage sag upon preloading said battery is not required for Group I. The subcombination has separate utility such as determining an anticipated fully charged battery voltage.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II and III, restriction for examination purposes as indicated is proper.

A telephone call was made to Patrick H. Potega on May 1, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
